

Easy programming with powerful results

Reduce your programming and testing time but increase your machine flexibility.

Advanced Industrial Automation

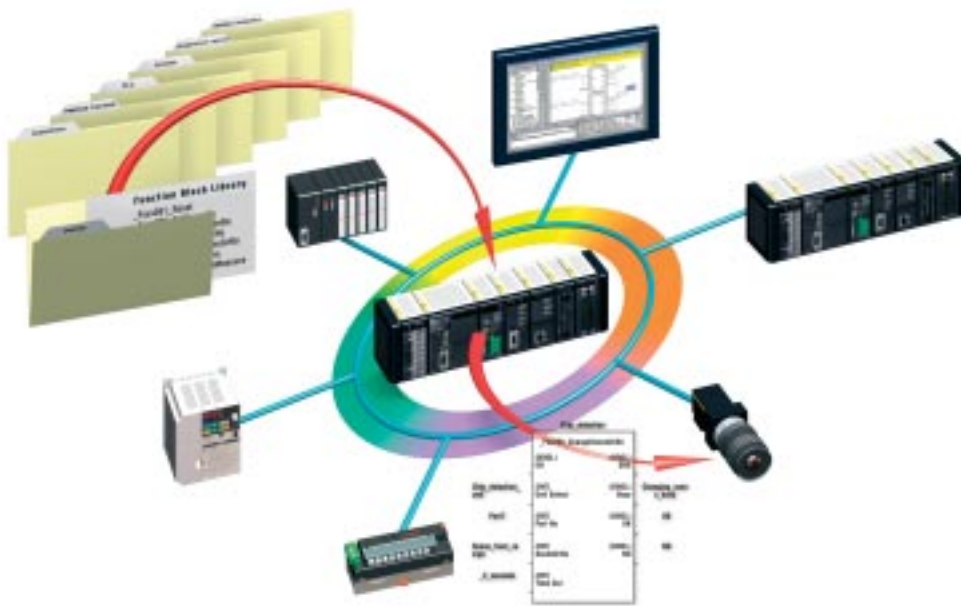

One programming tool

The ability to offer one software package - CX-Programmer - to program to configure and maintain the complete range of PLCs is not new for Omron. CX-Programmer adds powerful new functionality and continues adding support for new PLCs to the existing Omron range.

CX-Programmer saves you time and money

The latest version of this popular software adds some key new features such as Function Blocks to allow even faster, easier programming. These Function Blocks, when used with Omron version 3 CS1/CJ1 PLCs, can be easily created. Omron also supply a comprehensive library of pre-developed and pre-tested Function Blocks allowing you to reduce your programming and testing time and, when using this Omron library of Function Blocks, increase your machine functionality.

Examples of Function Blocks

- Monitor network connection
- Read the status of networks
- Monitor status of sensors on remote I/O
- Setting and operating motion control axis
- Setting and operation with Omron SMART sensors, safety & temperature controllers
- Change, switch & acquire screens from vision sensors

Register the software electronically and get full access to an ever increasing list of pre-tested Function Blocks from Omron.

Upwards Compatibility

CX-Programmer also offers file compatibility with all older software packages from Omron allowing older program or data files to be simply opened, or converted into CX-Programmer. This saves investments previously done.

Ease of use

Omron software is renowned for its ease of use, and CX-Programmer is no exception. It is one of the most intuitive programming software packages available on the market today. It is possible to start working on your project or application as soon as you get the software, without having to attend long training courses.

True drag-and-drop development

Working with CX-Programmer 5 is now easier than ever! The pre-made and pre-tested Function Blocks can be drag-and-dropped into the application to give you the machine functionality your customers demand, but without complex programming and testing previously required.

Additional Programming Languages

Ladder programming still remains the easiest language for many people to use, but some users prefer 'Structured Text' language - similar to 'Basic'. It allows complex math functionality to be created easily.

Ordering information

Product Name	Product Description
WS02-CXPC1-E-V50	CX-Programmer V5.0 full version for 1 user
WS02-CXPC1-E03-V50	CX-Programmer V5.0 full version for 3 users
WS02-CXPC1-E10-V50	CX-Programmer V5.0 full version for 10 users
WS02-CXPC1-EJ-V50	CX-Programmer V5.0 junior version for 1 user (NO CJ or CS support)
WS02-CXPC1-EUP-V50	Upgrade from Syswin / CX-Programmer V3
WS02-CXPC1-EUP03-V50	Upgrade from Syswin / CX-Programmer V3 3 users
WS02-CXPC1-EUP10-V50	Upgrade from Syswin / CX-Programmer V3 10 users
WS02-CXPC1-EUPJ-V50	Upgrade from Syswin / CX-Programmer V3 Junior
WS02-CXPC1-E-V50SS	Upgrade ONLY for CX-Programmer V4 users
